A.Y.::

CourseName::INDIAN ECONOMY

M.Saroja .Lect.in Economics

About the Course::

• **Course Aims and Syllabus:** The course aims to cover the following topics:

- Development in sustainable way
- Poverty and its alleviation
- Inclusive growth
- Demographics of India
- Initiatives in the social sector
- Government schemes

- Indian Economy and issues related to economic planning, resource use, resource mobilization, growth of the economy and employment data.
- Inclusive growth and issues associated with inclusive growth
- Government budgeting
- Major crops of India and important cropping patterns used in various parts of India
- Different kinds of irrigation and systems in use such as canals and surface irrigation, drip irrigation etc.
- Issues related to marketing and transport of agricultural produce and constraints
- e- Technology to help farmers
- Direct and indirect farm subsidies and related issues
 - Minimum support price
- Public Distribution System

- Objectives and importance
- Functions of Public Distribution System
- Advantages and disadvantages of PDS and its limitations
- Revamping and reorganization of the system

List of Enrolled Student::

S.NO	NameoftheStudent	Stream/Group
1	A.Vineetha	BScBZC
2	B.Maheshwari	BScBZC
3	B.Srilatha	BScBZC
4	B.Sravanthi	BScBZC
5	B.Sandhya	BScBZC
6	M.Prameela	BScBZC
7	K.Manasa	BScBZC

DEPARTMENT OF ECONOMICS

The graphic is set against a light blue background with a subtle grid. On the left, there is a line graph with five data points connected by lines, showing an overall upward trend. Below the graph is a semi-circular gauge with a needle pointing towards the right. To the right of the graph and gauge, the text 'Economic Indicator' is written in a large, bold, black font. Below this, the phonetic transcription '[,e-kə-'nā-mik 'in-də-,kā-tər]' is provided. Further down, a paragraph explains that economic indicators are data used to gauge the health or growth trends of a nation's economy or a specific industry sector. At the bottom right of the graphic, the Investopedia logo is visible.

Economic Indicator

[,e-kə-'nā-mik 'in-də-,kā-tər]

Data used to gauge the health or growth trends of a nation's economy, or of a specific industry sector.

A.Y::2019-2020

Course Name::Statistics for Economics

K.LAXMI .Lect.in Economics.

About the Course::

Definition of Statistics in Economics

Statistics, in itself, is the collation and analysis of numerical data to arrive at specific inference. This academic discipline finds application in various other branches of studies, such as Economics. Any study about Economics and Statistics involves the validation of theories with quantified data sets. For instance, the Theory of Demand must be eventually supported by the examination of data on incomes, quantities and prices.

Definition of Statistics

Originally the term 'statistics' was used to collect data relating to historical and descriptive regions. It has now acquired a very broad definition and is used for all types of data and methods for data analysis. So in recent times, it has been used in two ways, namely, singular and plural.

Features of Statistics in its Plural Sense

- Expressed numerically: Economic statistics are numerical and quantitative. Symbolic adjectives such as rich, poor, tall etc. have no value attached to the universal mathematical value.
- Reasonable accuracy: The mathematical conclusion must be accurate based on the purpose of the investigation, its nature, size and available resources.
- Can involve estimation: If the field of study is large, for example, the number of people attending the rally, a small estimate can be tricky. However, for small learning areas, take, for example, the number of students in each college learning area, counting numbers directly is easy and important.
- Systematic collection of data: Data collection should be done in an orderly manner, that is, raw data collection without any information about its origin, purpose etc. is not allowed in the mathematical universe.
- Relative: Economic statistics in their sense of quantity have a comparative aspect. This means that the same type of data from different sources can be compared.

- Multiple items: Statistics are affected by a large number of features and not just one item. For example, an increase in the price of an asset is not the result of a change in one area but a result of a large number of factors.
- Addition: Mathematics is a middle or integration game. The number represented by one business is not related to statistics. For example, the height of one student is not mathematical data but the average length of students in a class is the same.

Statistics in its Singular Sense

Whenever we use mathematical methods for collecting, dividing, presenting, analyzing, and interpreting quantitative data, we call mathematics a singular noun. In addition, this involves holding various stages of mathematical research. Each section has its own set of tools to do a specific task. These are:

- Stage 1- Data Collection: First we need to collect statistical data to begin the statistical research journey. Census techniques and samples are commonly used in this category.
- Phase 2- Data editing: Yes data in raw or chaotic format is difficult to translate. This is the reason why the second phase deals with the classification of collected data. Data editing is done with the help of data collection and statistics bars.
- Step 3- Data Presentation: After editing, this data needs to be properly presented. Data presentation is widely achieved with the help of tables, graphs, and diagrams.
- Phase 4- Data analysis: Before moving on to the final stage, we first need to find out the percentages, averages and so on to draw conclusions about the data. Percentages, estimates, correlations and regression coefficients form the data analysis toolbox.
- Stage5- Data Translation: Finally, we need to translate data and conclude or build ideas about data. This is done with the help of percentage size, average, and level of relationship between different economic variables.

Benefits of Statistics in Economics

There are many economic benefits to economics. We cannot imagine economics without statistics. Statistics have put the economy on another level. Here are a few economic benefits: -

- Quantitative expression:

Statistics give extra weight to quantity data. It also enhances economic credibility and financial integrity by releasing data in bulk. If you understand the size of the mathematical data, it would be easier for us to solve the economic crisis.

- Economics Theories Deduction:

Economic statistics are also useful in attracting economic ideas. It helps to establish theories of economic theatre and models by providing evidence.

Identifying patterns and predicting economic events. It is also helpful to identify patterns in the data. There are many economic math tools that help you do this job successfully. So it helps to predict future trends.

- Policy formulation:

Policy formulation is used to formulate national policies. Statistics are very helpful in creating an effective policy. There are many economic statistics that help you create better policies. Many economists use mathematical tools in this field.

- Economic equality:

It is a workplace used between manufacturers and consumers. In this case, both sides are satisfied with the market. It is very easy to do economic equality and economic statistics.

If you are asked to write three sentences highlighting the importance of Statistics in Economics, the following points would be the relevant aspects-

- The explanation of different parameters in Economics may require quantification for further study. Based on such quantitative data, comparison can be made across various sectors within the economy as well as across different plan periods.
- Data sets are required to present causal relationships between different phenomena, which become particularly important for policy formulation.
- For the development of Economic theories such as variation of price concerning product demand, concrete data sets are required.
- Statistical data becomes essential in terms of forecasting for alterations in economic influence factors.

Characteristics of Statistics;

Any discussion in the concept of Economics and significance of Statistics in Economics notes would necessarily focus on different features of Statistics as well. Some of those features are:

1. Aggregation of Facts

Numerical data is essentially an aggregation of facts, which means, there will be multiple facts or information clubbed together. Influence on data – There are multiple causes which influence data to a certain extent. For example, any data on malnutrition will not only include poverty as one of its underlying causes but also other aspects such as hygiene, practices of a marginalized community etc.

1. Data Presentation

There are specific stipulations in terms of data presentation. It has to be numerically expressed accurately and also placed in the common context of each other.

1. Collection

The collection of data should necessarily be for a predetermined purpose, and the collection technique has to adhere to any given systematic procedure.

Various Stages of Statistical Method

Stage I:

The initial step is to have a clear idea of with regards to the problem that has to be worked on. Based on such a clear definition can the identification and collection of data be undertaken.

Stage II:

Before starting data collection, there is a range of steps that have to be observed. The steps are (a) determination of the source of data, (b) type of enquiry, (c) defining the statistical unit and (d) establishing a degree of accuracy.

Stage III:

A proper method of data collection has to be decided regarding the nature of study, scope and objective of the research, grants provided etc. The most common techniques adopted for data collection are sampling techniques or census techniques.

Furthermore, the raw data has to be organized and edited for interpretation purposes. Data organization can be done by way of tally bars, among others.

Stage IV:

Data analysis is done through Statistical measures such as coefficients, percentages, averages etc.

Stage V:

The final stage is the interpretation of data to arrive at a conclusion based on the data sets. The patterns or relations in interpretation lend a broader meaning to the findings of the survey.

Benefits of Statistical Study in Economics

In the concept of Economics and significance of Statistics in Economics, the advantages inherent to Statistical Study indicates the latter's importance –

- The quantitative expression extends higher accuracy and credibility to result.
- The development of Economic theories requires grounding on Statistics for the creation of viable models.

Corse Name::TELANGANA ECONOMY

By K.LAXMI .Lect.in Economics

About the Course::

- 1.The State Domestic Product (SDP) is the most important economic indicator which measures the value of all final goods and services produced within state boundaries in a year, reflects the remarkable progress.
2. The extraordinary overall growth achieved by Telangana has been attained on account of its remarkable performance in the 3 key sectors that contribute to any economy – Agriculture & Allied Sectors, Industries (including mining and quarrying) and Services sector.
3. The increased revenue pool was utilized by the Government to expand its spending on productivity enhancing and welfare-augmenting programmes, in order to further increase the growth rate of the economy, thus setting in motion a cycle of prosperity.

Summary::

Course Status:	Completed
Course Type:	Core
